COST SAVINGS

RE: SAF-T-POLE™ IRRIGATION TOWERS

AMMI, a leader in Irrigation Tower Technology, would like to introduce to you our unique I.V. Tower and show you how you can **save \$\$\$**, while improving your technique by using it.

PUMP USERS

If you are using a pump, each tubing set will cost you an average of **\$70** per procedure compared to a \$7 for a gravity tubing set. Your savings per procedure is **\$63**; 33 procedures and you have paid for the Tower. The 34th procedure is saving you money already. Figure it out for yourself, how quickly your payback is after 1 month, 3 months, or 6 months?

How about the set up time, potential air in the system, sensor malfunctioning and other maintenance? **AMMI'S IRRIGATION TOWER** could also be a back up for a malfunctioning pump.

REGULAR I.V. POLE USERS

If you are using a regular I.V. POLE you cannot stagger the bags, therefore fluid is wasted during bag changes and back strain can result from raising the pole with 2 or 4 heavy bags. How about stability (using sandbags), loss of irrigation when bringing it down, or the danger of using a step stool to change bags that are 8 feet up in the air. **Try AMMI'S IRRIGATION TOWER** the bags can be raised one-handed by pushing the handle down allowing easy raising and reducing the risk of back injury. It is designed with a patented wide 5-legged non-tipping inverted base with 5 dual casters so there is no need for sandbags. Feel the difference while realizing cost savings.

COMPETITOR'S PRODUCTS

How about competitor's products such as the OMNI Dittmar Power Lifter? It will cost you **60-75% more** than the **AMMI economical IRRIGATION TOWER**. In addition, **AMMI'S IRRIGATION TOWER** provides you with a better ergonomical solution to irrigation problems than competitive brands.
