

# ScopeMate™

Pat. Pend.

## Scope Storage and Handling Device With Bag System

**ScopeMate™** is a storage device for a standard bronchoscope, ENT & Echo Scopes designed to enclose and protect the delicate device from costly damage. It mounts on the workstation via either strong magnets or a pole clamp.

The device serves three major roles:

- As a bronchoscope ergonomic mount and protector for procedure suite / operating room use.
- As a transport enclosure that protects the delicate device during movement between locations.
- As a long term storage device.

The **ScopeMate™** is designed to attach to and protect the bronchoscope and other scopes as well as to house it ergonomically at all times; only when the scope is in use in the patient or being decontaminated, should it be outside this secure enclosure.

➤ The **ScopeMate™** incorporates two bag systems. The first is a disposable sleeve inside the tube to potentially prevent cross contamination between patients. The second, drawstring disposable bag is used to carry accessories safely with the **ScopeMate™**.

➤ Multiple (including custom) configurations available for all size endoscopes. Please inquire.

➤ The **ScopeMate™** incorporates disposable clamp foam cushion to protect the scope head during storage & transportation, as well as a Clean/Dirty disposable label to be used with the Plastic Sleeve (see picture next page).
